Lesson Plan Topic: Exponent Rules Pattern Investigation
Subject/Grade: Math 8
Materials Handout: "Exponent Rules Pattern Investigation"

| Georgia <br> Performance <br> Standards | M8N1. Students will understand different representations of numbers including square <br> roots, exponents, and scientific notation. <br> i. Simplify expressions containing integer exponents. |
| :--- | :--- |
| Enduring <br> Understandings | I want students to understand the exponents are a shortcut method to write <br> repeated multiplication. I also want students to understand how the exponent rules <br> are derived so they are more likely to remember them, as well as develop greater <br> algebraic understanding. |

Choose from or use all of the following:

- How can I simplify and evaluate algebraic expressions with exponents?
- When are exponents used?
- Why are exponents important?

| Opening | Remind students that much of what they learn in math is related to patterns since the human brain is adept at recognizing and understanding patterns. Give students a few patterns (i.e. linear relationships) to identify. Add more if needed or students are interested. <br> Pattern 1: <br> Pattern 2: <br> Pattern 3 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | x | y | x | y | x | y |
|  | 0 | 0 | 0 | 1 | 0 | -1 |
|  | 1 | 2 | 1 | 3 | 1 | 1 |
|  | 2 | 4 | 2 | 5 | 2 | 3 |
|  | 3 | 6 | 3 | 7 | 3 | 5 |
|  | Pattern: 2x = y |  | Patt | 1 = y | Pattern: $2 \mathrm{x}-1=\mathrm{y}$ |  |
| Mini-lesson | Briefly reteach students about exponents and bases and their purpose. Make sure students can convert between exponential form and expanded form (and back). Also, remind students that any number divided by itself is 1 (ex: $\frac{4}{4}=1$ or $\frac{x}{x}=1$ ). |  |  |  |  |  |
| Work Period | Have students complete the Exponent Rules Pattern Investigation. They will used five of the six level of Bloom's Taxonomy. Help students verbalize their "rule" for each category of exponent operations, and let them write it in their own language. Attempt to have students use the proper vocabulary in their "rule," but that language will emerge in the summary regardless. Stress the ideas rather than the vocabulary. |  |  |  |  |  |
| Differentiation | Students can be paired to complete the activity. All students are required to complete the same pattern investigation. <br> - Struggling learners will need more help at the beginning of each section as well as verbalizing their "rule." <br> - Have accelerated learners work on verbalizing and writing an explanation for the rule |  |  |  |  |  |

## Summary The following topics should emerge during the summary

- A reminder of the purpose of a base and an exponent
- The rules (verbal) for multiplying with exponents, dividing with exponents, and raising an exponent to another exponent
- The reasons that each of these rules work mathematically
- The algebraic notation for each of these rules

Assessment

1. Teacher observation of students working (formative)
2. Student handout (summative)
3. Possible assessment: Have students apply their rules to new expressions; would also use an additional level of Bloom's Taxonomy (summative)

Identify the base in $4^{3}$. What information does it give you?

Identify the exponent in $4^{3}$. What information does it give you?
Understand Explain how $2^{3}$ different from $2 \cdot 3$ ?

Analyze and Create: Write the Problem expression in E•X•p•a•n•d•e•d F•o•r•m, then simplify the expression by writing the correct ExponentialForm. At the bottom of each section, write a rule explaining to other people how to simply expressions with many exponents.

| Multiplying Numbers with Exponents |  |  |
| :---: | :---: | :---: |
| Problem | E*x•p•a•n•d•e•d F*o•r•m | Exponential ${ }^{\text {Form }}$ |
| 1. $2^{2} \cdot 2^{3}$ | $\underline{2 \cdot 2 \cdot 2 \cdot 2 \cdot 2}$ |  |
| 2. $3^{4} \cdot 3^{2}$ |  |  |
| 3. $4^{2} \cdot 4^{5}$ |  |  |
| 4. $5^{2} \cdot 5^{4} \cdot 5^{3}$ |  |  |
| 5. $\left(10^{3}\right)(10)$ |  |  |
| 6. $\left(10^{5}\right)\left(10^{3}\right)\left(10^{2}\right)$ |  |  |
| 7. $\left(x^{2}\right)\left(x^{3}\right)$ |  |  |
| 8. $\left(p^{4}\right)\left(p^{5}\right)(p)$ |  |  |
| Look at the original exponents in the Problem and the exponents in the ExponentialForm . Write the rule for multiplying numbers with integer exponents: |  |  |

| Exponents Raised to an Exponent (a.k.a. Power to a Power) |  |  |
| :---: | :---: | :---: |
| Problem | E*x•p•a•n•d•e•d F*o•r•m | ExponentialForm |
| 1. $\left(2^{3}\right)^{2}$ | $2^{3} \cdot 2^{3}=\underline{2 \cdot 2 \cdot 2} \underline{2 \cdot 2 \cdot 2}$ |  |
| 2. $\left(2^{2}\right)^{3}$ |  |  |
| 3. $\left(2^{2}\right)^{4}$ |  |  |
| 4. $\left(2^{3}\right)^{3}$ |  |  |
| 5. $\left(2^{2}\right)^{4}$ |  |  |
| 6. $\left(a^{5}\right)^{2}$ |  |  |
| 7. $\left(w^{5}\right)^{3}$ |  |  |
| 8. $\left(\mathrm{g}^{5}\right)^{3}$ |  |  |

| Dividing Numbers with Exponents |  |  |
| :---: | :---: | :---: |
| Problem | E*x•p•a•n•d•e•d F*o•r•m | Exponential ${ }^{\text {Form }}$ |
| 1. $2^{5} \div 2^{2}=\frac{2^{5}}{2^{2}}$ | $\frac{2 \cdot 2 \cdot 2 \cdot 2 \cdot 2}{2 \cdot 2}$ |  |
| 2. $4^{6} \div 4^{2}=\frac{4^{6}}{4^{2}}$ |  |  |
| 3. $5^{6} \div 5^{2}=\frac{5^{6}}{5^{2}}$ |  |  |
| 4. $3^{5} \div 3^{3}=\frac{3^{5}}{3^{3}}$ |  |  |
| 5. $10^{7} \div 10^{4}=\frac{10^{7}}{10^{4}}$ |  |  |
| 6. $\mathrm{r}^{4} \div \mathrm{r}^{2}=\frac{\mathrm{r}^{4}}{\mathrm{r}^{2}}$ |  |  |
| 7. $\mathrm{s}^{7} \div \mathrm{s}^{3}=\frac{\mathrm{s}^{7}}{\mathrm{~s}^{3}}$ |  |  |
| 8. $\mathrm{m}^{10} \div \mathrm{m}^{3}=\frac{\mathrm{m}^{10}}{\mathrm{~m}^{3}}$ |  |  |
| Look at the original ex Exponential ${ }^{\text {Form }}$ | ts in the Problem and the expo he rule for dividing numbers with | s in the eger exponents: |

## Create and Evaluate

## Rewrite your rule for multiplying numbers with exponents.

Which rule is the same as your rule?
A. $x^{a} \cdot x^{b}=x^{a+b}$
B. $\frac{x^{a}}{x^{b}}=x^{a-b}$
C. $\left(x^{a}\right)^{b}=x^{a \cdot b}$

## Rewrite your rule for a power raised to a

 power.Which rule is the same as your rule?
A. $\frac{x^{a}}{x^{b}}=x^{a-b}$
B. $\left(x^{a}\right)^{b}=x^{a \cdot b}$
C. $x^{a} \cdot x^{b}=x^{a+b}$

Rewrite your rule for dividing numbers with exponents.

Which rule is the same as your rule?
A. $x^{a} \cdot x^{b}=x^{a+b}$
B. $\left(x^{a}\right)^{b}=x^{a \cdot b}$
C. $\frac{x^{a}}{x^{b}}=x^{a-b}$
